Using Deep Links

THE BEST RUN **SAP**

Content

1 Deep Links

A deep link is a hyperlink that links directly to a specific page in the SAP SuccessFactors system, rather than the start page.

Deep links can be used anywhere hyperlinks are possible. You can use them in offline content, such as in internal documentation, or on websites, such as your company portal. They can also be used in external, third party applications. You can also use them within the SAP SuccessFactors system itself, such as on the home page or employee profile or in the main navigation menu.

> → Tip
>
> True deep links begin with `/sf/` and rarely change. Other URLs can change from version to version.
>
> You should only use true deep links to link to SAP SuccessFactors pages. Other links may stop working or may navigate to legacy pages that are no longer supported.

You can add parameters to the URL for some deep links, containing additional data. Parameters allow a third party application or extension to dynamically insert a specified user into the deep link URL. If you add a deep link to the user interface using the Custom Navigation tool, you can use a URL token to insert the user parameter.

2   Creating a Deep Link

Create a deep link that you can use to hyperlink to a specific page in the SAP SuccessFactors system.

Procedure

1. Determine the base URL of the system.

   The base URL contains the domain name used by the application server and it varies by customer and region.

2. Add a deep link path to the base URL, separated by one forward slash (`/`).

   > ⚙ Example
   >
   > This example links to the logged-in user's development plan.
   >
   > ```
   > https://<app-server-domain>/sf/devplan
   > ```

3. If supported by the deep link you're using, add a question mark (`?`) separator after the deep link path, followed by a URL parameter, as a name-value pair.

   > ⚙ Example
   >
   > This example links to the Personal Information section of the employee profile for user ID jsmith123.
   >
   > ```
   > https://<app-server-domain>/sf/personalinfo?selecteduser=jsmith1234
   > ```

4. Separate multiple parameters with an ampersand (`&`).

   > ⚙ Example
   >
   > This example links to the performance review form for user ID jsmith123 and for form ID 4567.
   >
   > ```
   > https://<app-server-domain>/sf/pmreview?username=jsmith123&fid=4567
   > ```

5. If supported by the deep link you're using, add a hash mark (#) separator after the URL parameters.

   > ⚙ Example
   >
   > This example links to the Employee Self-Service page for Time Forms.
   >
   > ```
   > https://<app-server-domain>/sf/timeForms?selected_user=userid897#/essScreen
   > ```

6. Insert the deep link URL as a hyperlink in the desired location.
